

PRIMAVERA

Qué ocurre en esta estación?

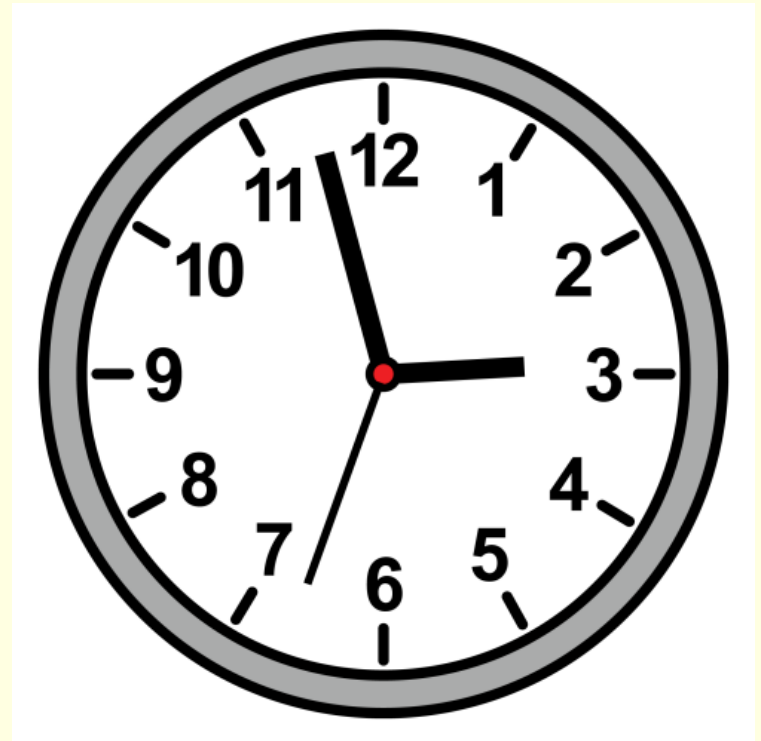

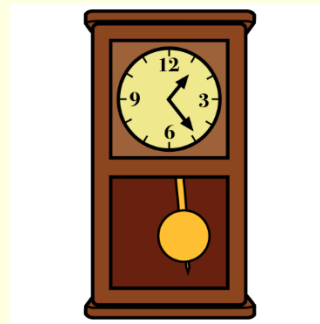

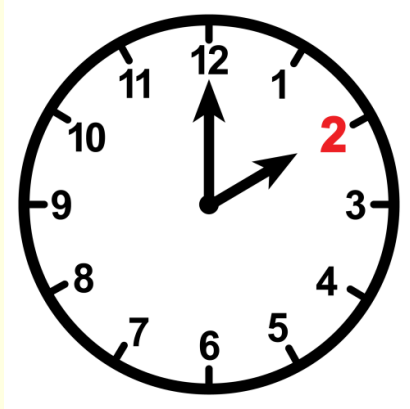

Dimpués de l'ibierno plega la primavera. Prenzipia o 20 de marzo.

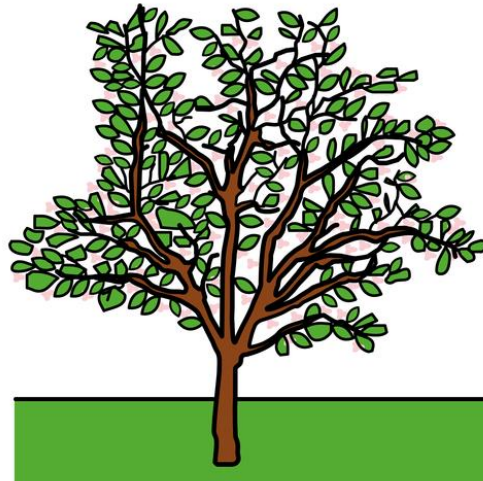

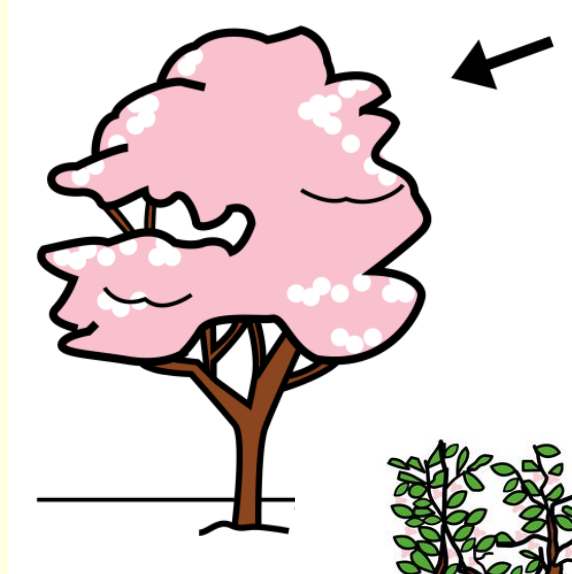

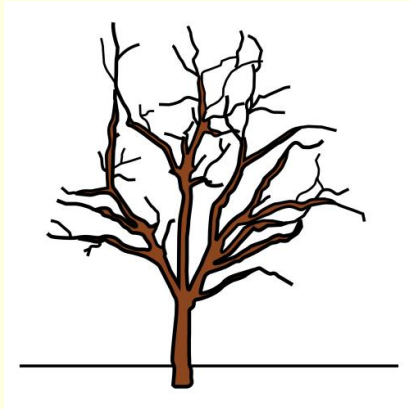

Bi ha más oras de sol. Os diyas son más luengos y as nueis más curtas. O sol calienta más.

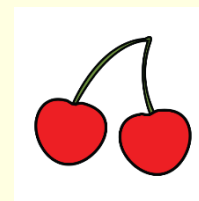

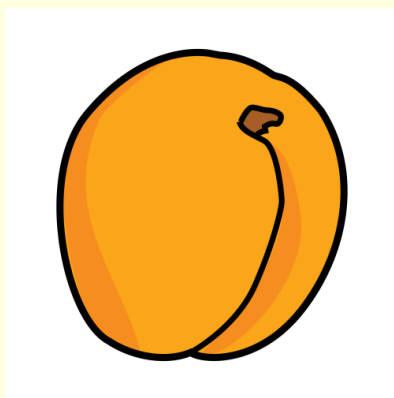

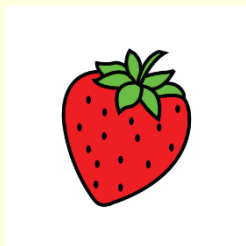

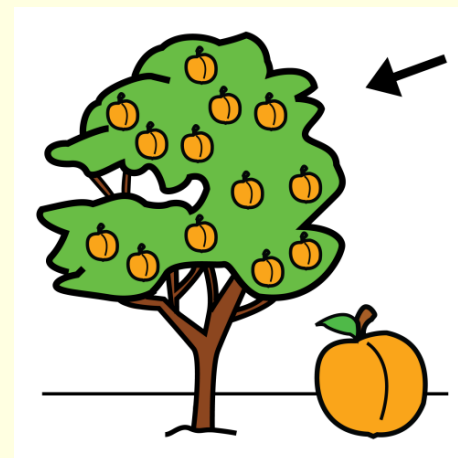

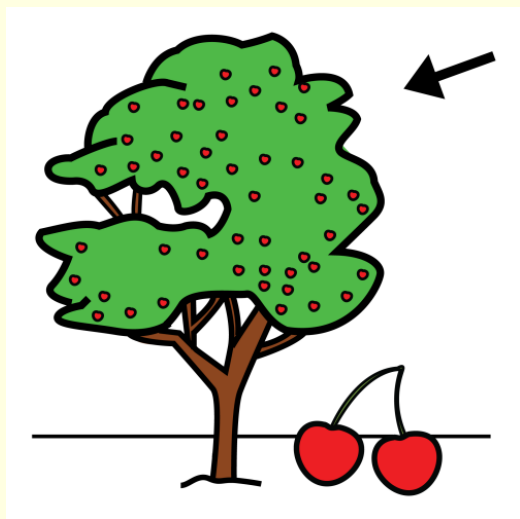

O zaguer sabado de marzo cambia la ora:
s'abanzan una ora os reloches. A las dos
son as tres

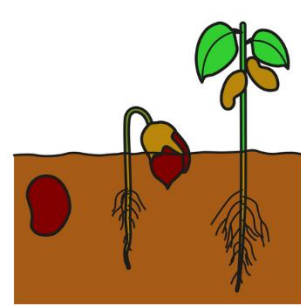

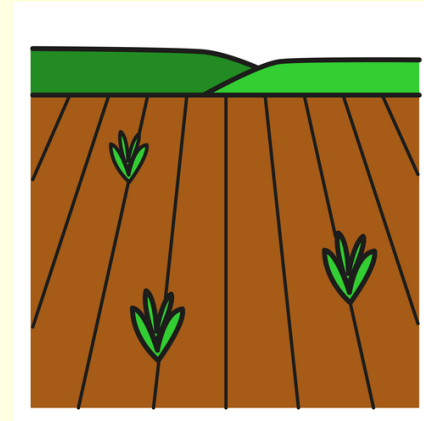

Os arbols que yeran espullatos prenzipian a florexer y a brotar-lis fuellas.

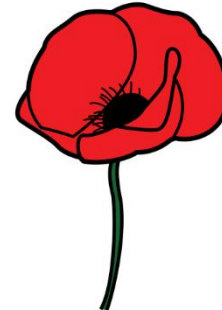

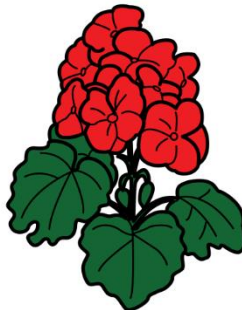

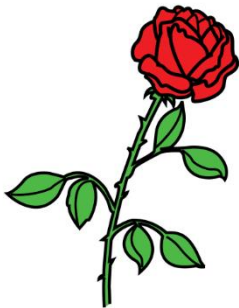

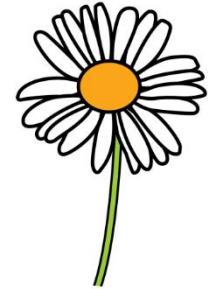

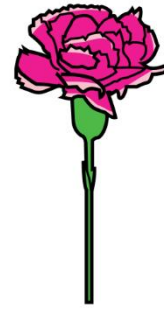

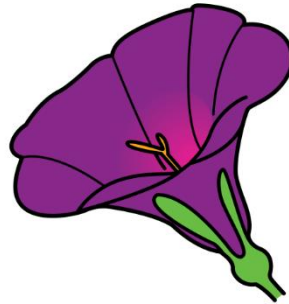

Dimpués plegan as fruitas: ye puenda de
ziresas, fragas, alberches, niespolas...

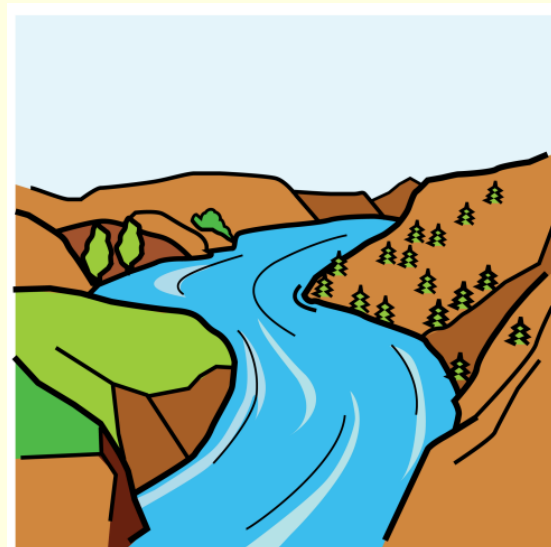

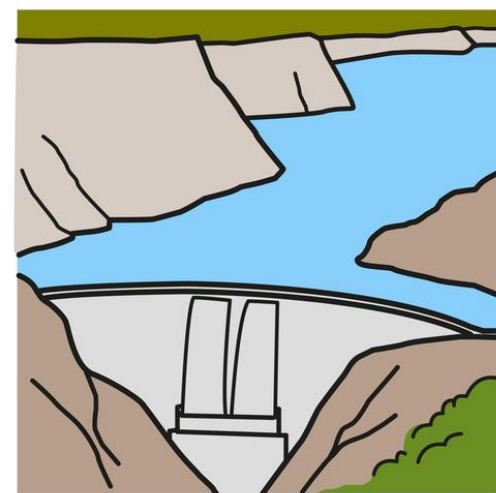

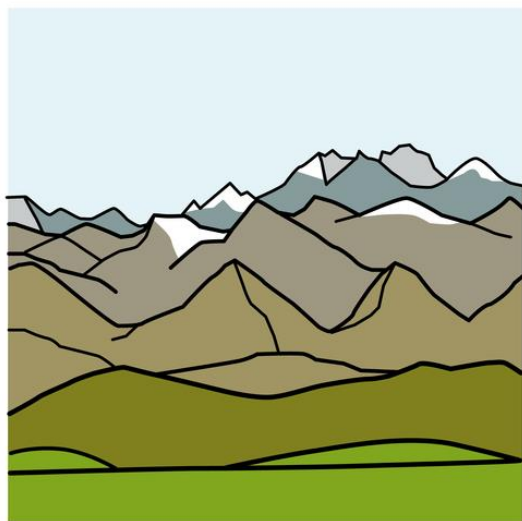

O paisaxe ye muito verde, as plantas
crexen más aprisa.

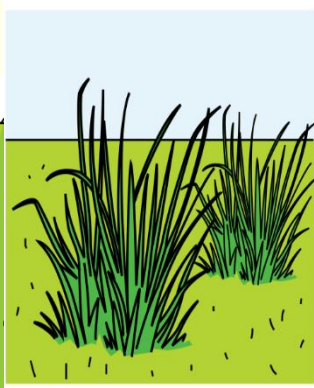

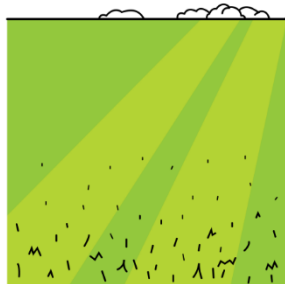

En campos y chardins florexen ababols,
margalidas, campanetas, clavel, cheranios,
calas, pensamientos...

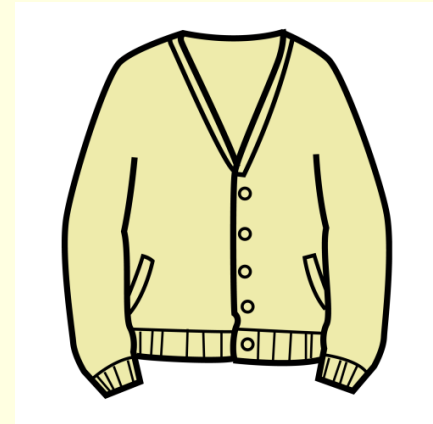

Con a calor, a nieu d'as montañas se regala
y baxa por os ríos ta plenar os entibos.

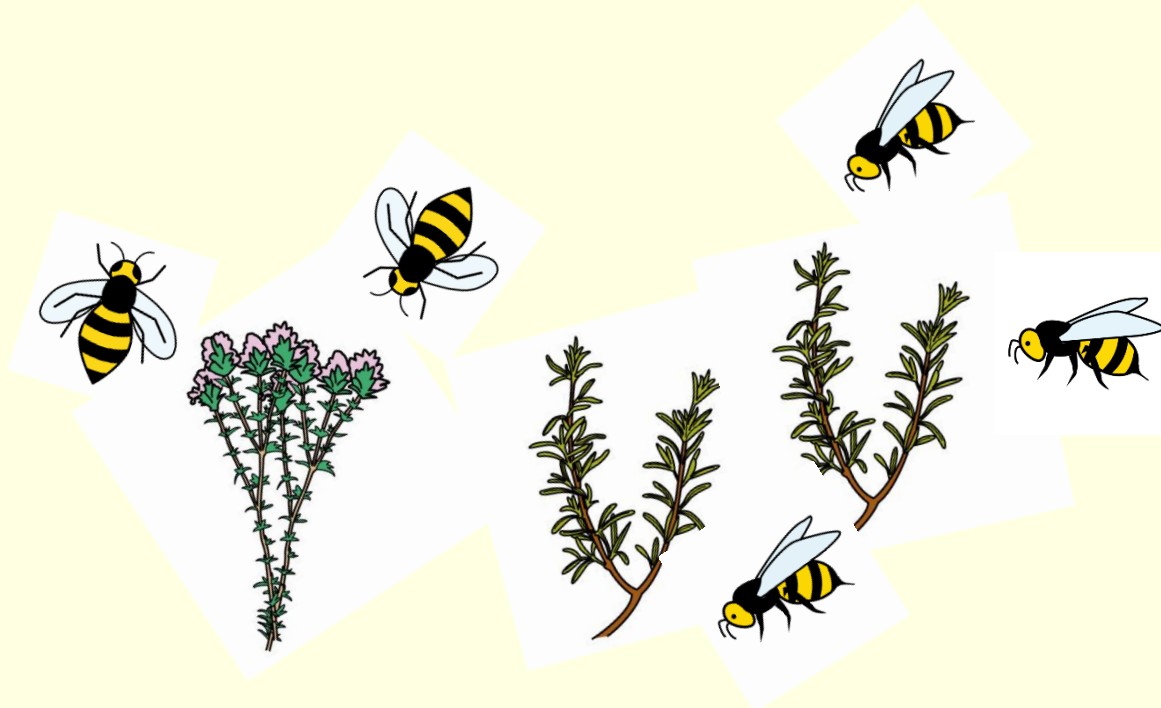

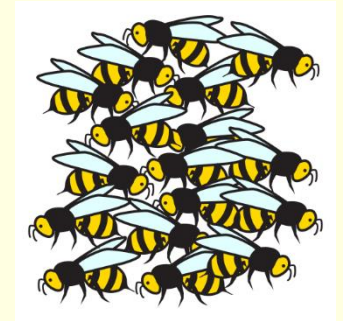

Pleve y tot ye muito verde. Crexe a yerba

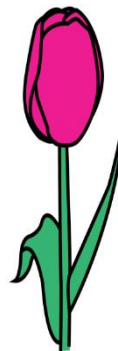

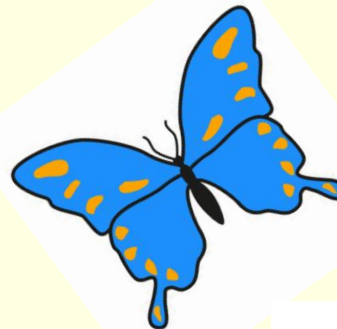

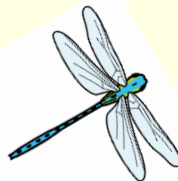

Nos ficamos prendas más ligeras. Imos
alzando os gambetos, tapabocas, os guans, ...

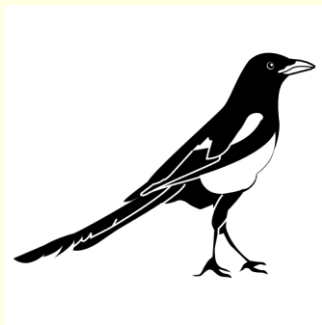

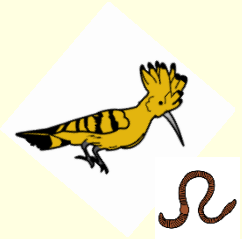

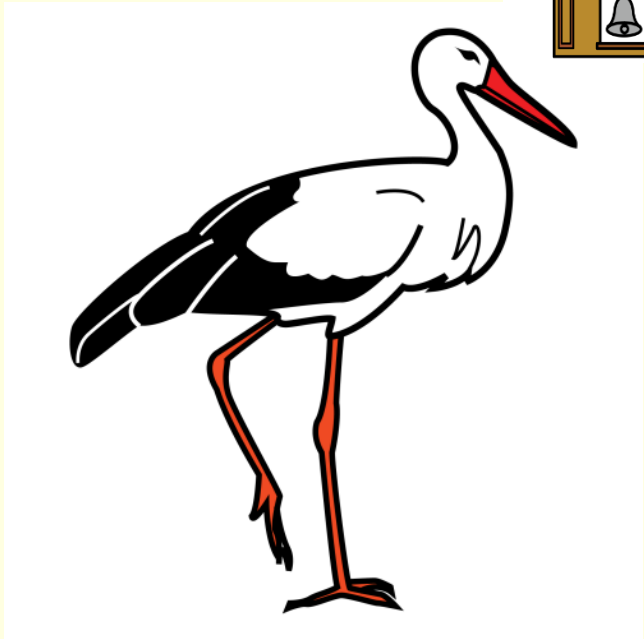

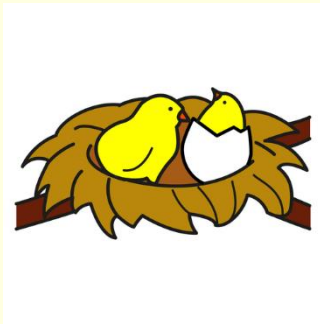

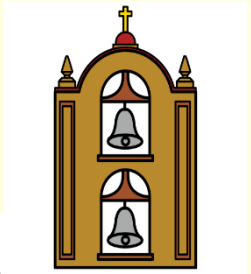

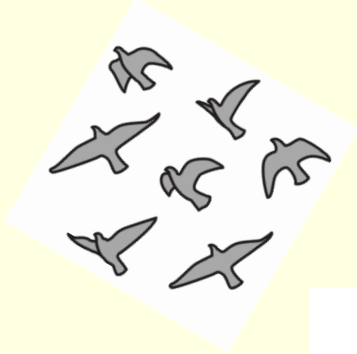

As abellas, birabolas y otros inseutos
esvolastrían arredol d'as flors.

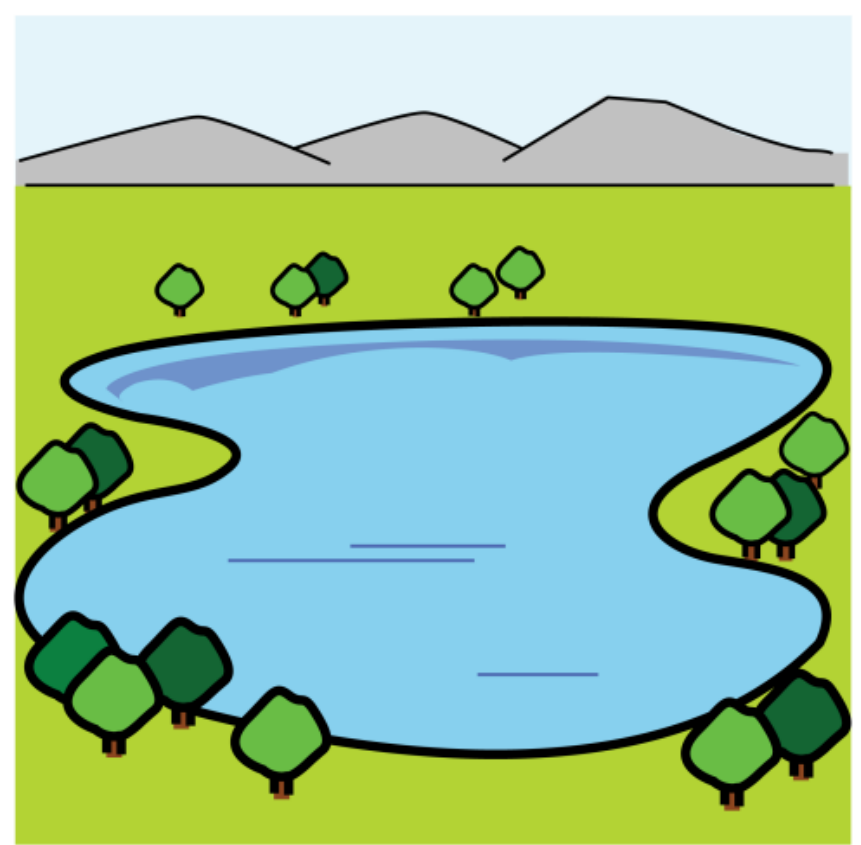

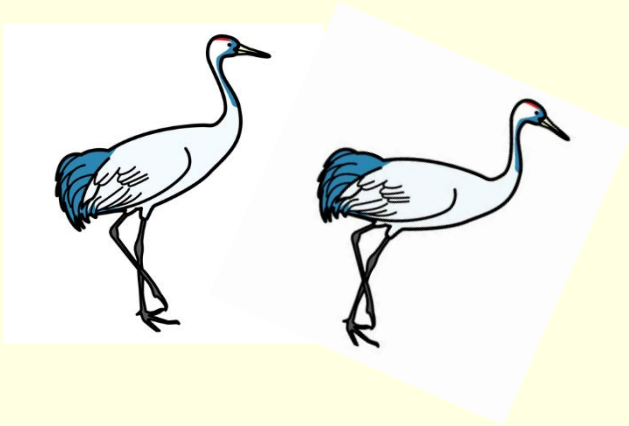

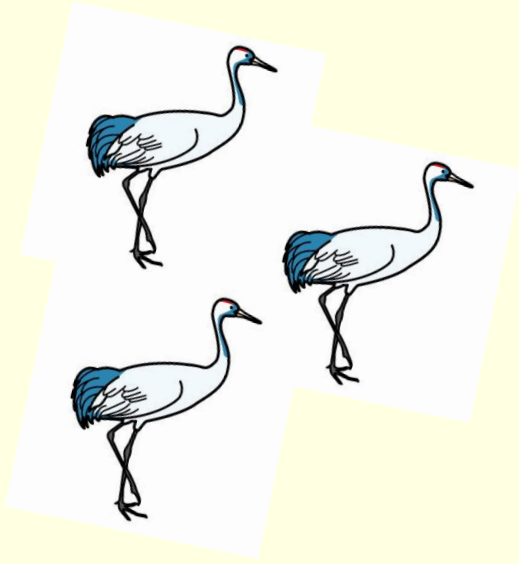

Ta sucar o néutar u alimentar-se.

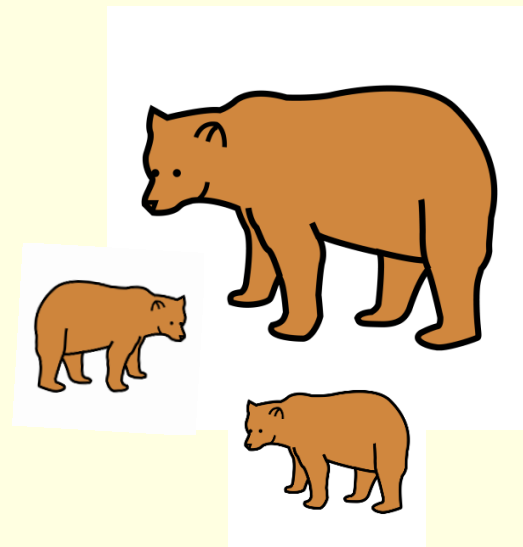

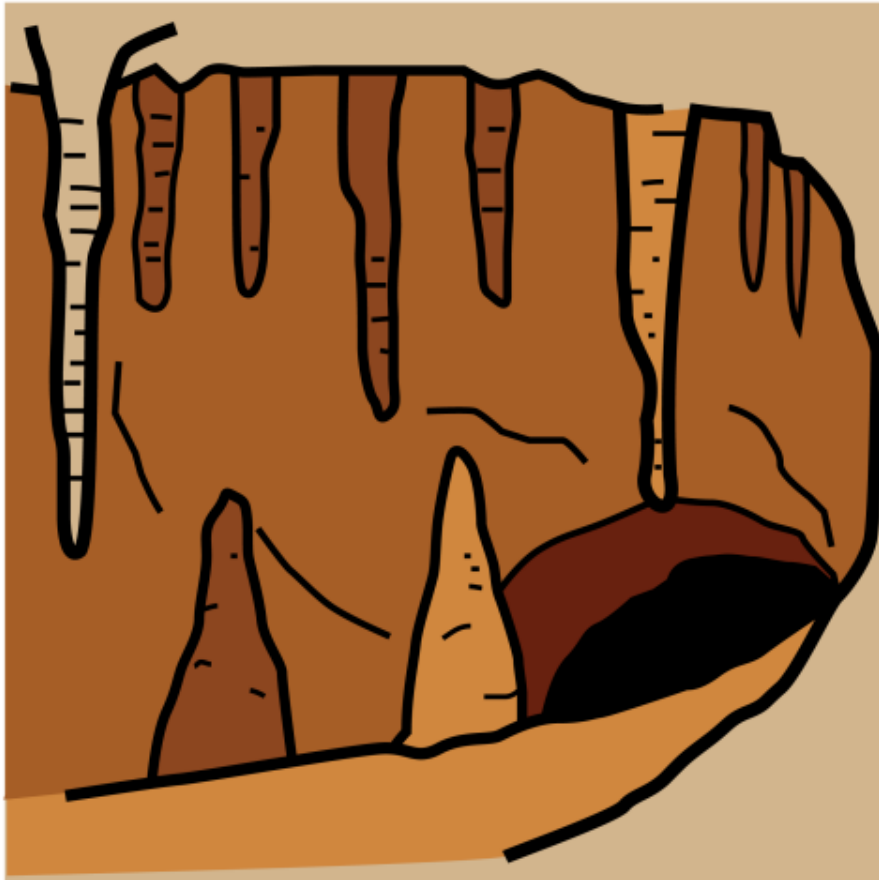

I tornan as aus que emigraron por o frío, fan os suyos nidos y ponen uegos.

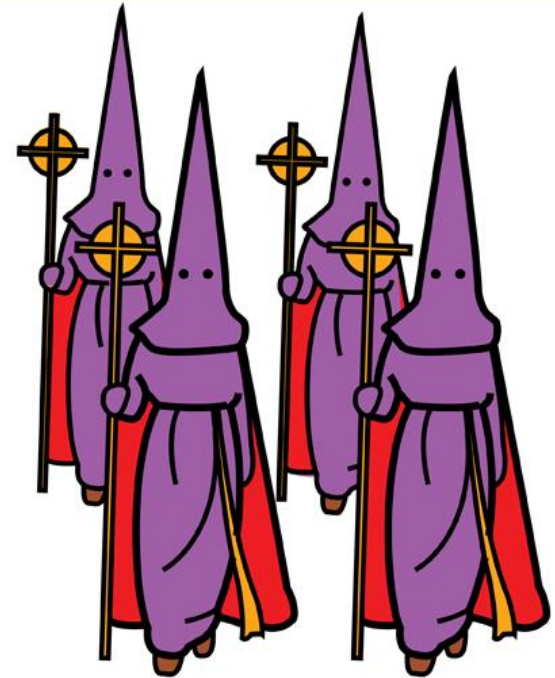

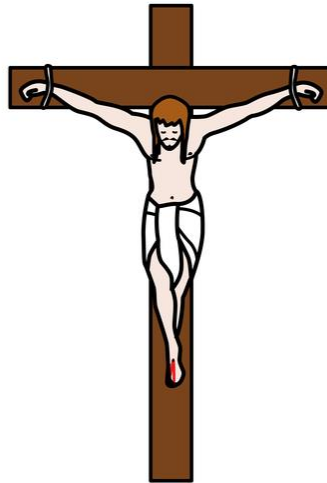

As grudas retornan ta la lacuna de Gallocanta antis de continuar o suyo viache enta o norte.

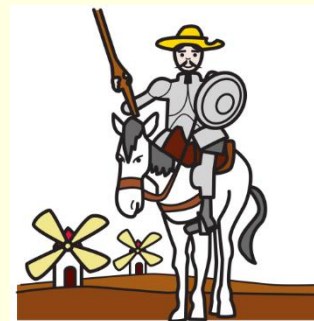

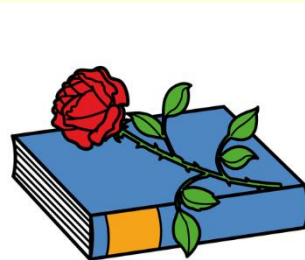

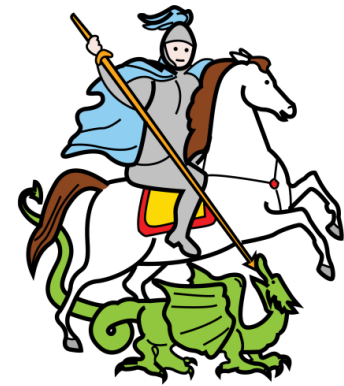

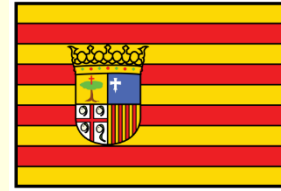

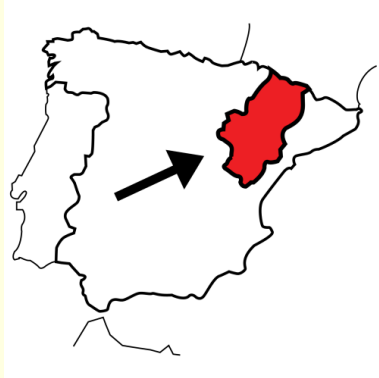

Os animals que s'aletargoron mientras o frío, salen d'os suyos cados.

Se celebra a Semana Santa.

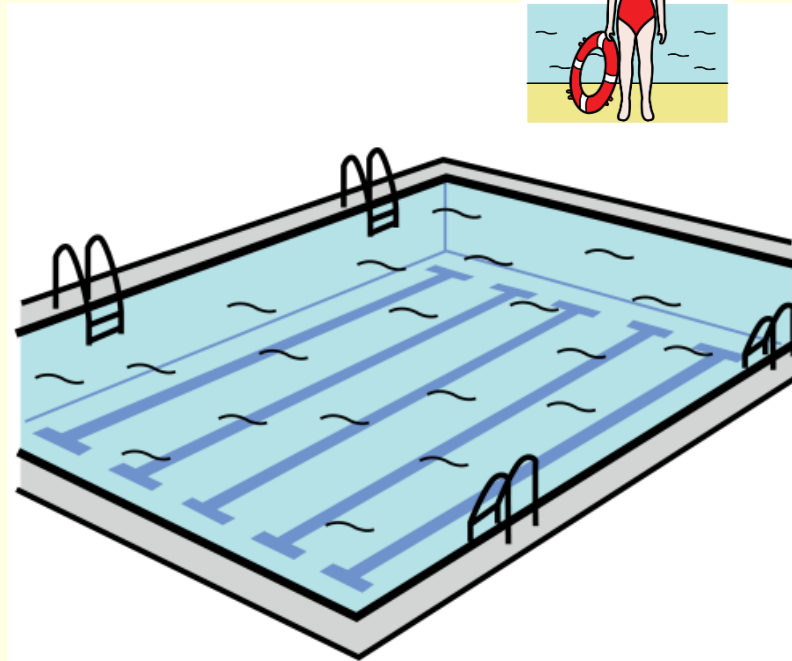

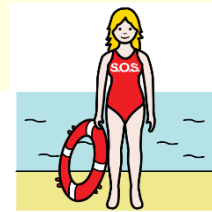

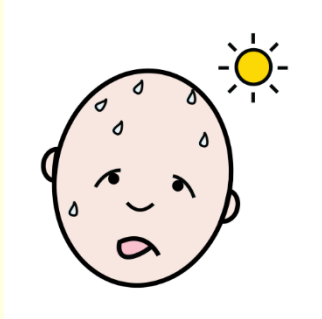

O 23 de abril, San Chorche (San Jordi en Cataluña): se zelebra o diya d'o libro y o diya de Aragón.

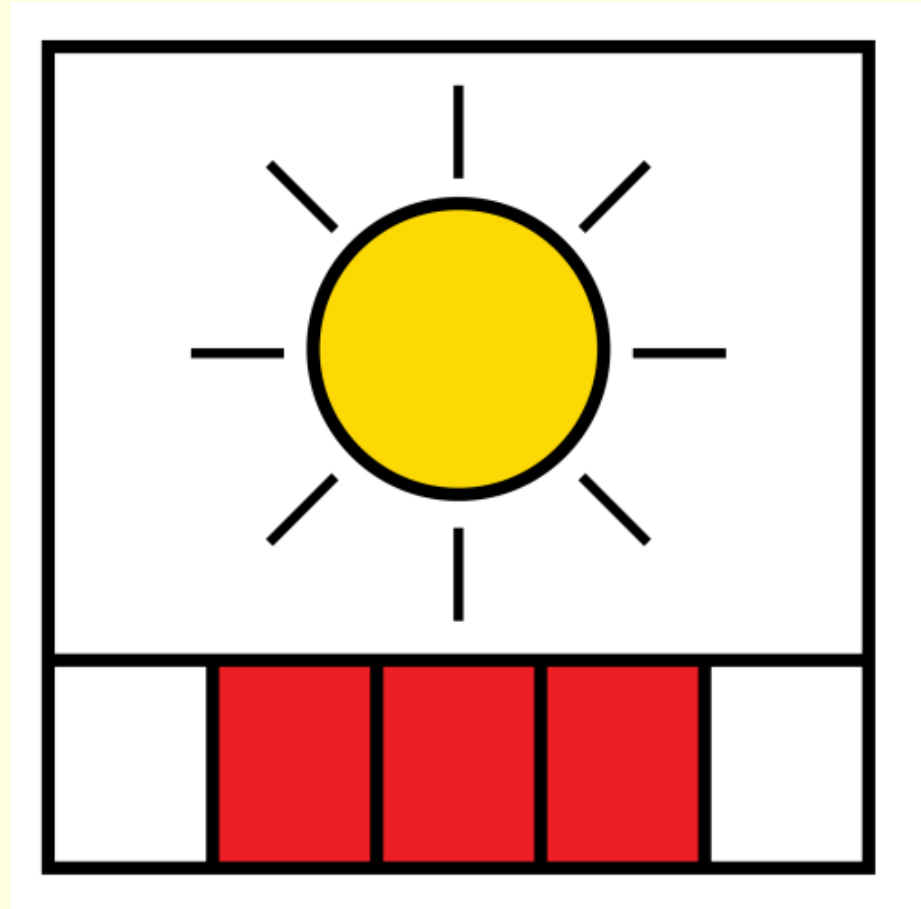

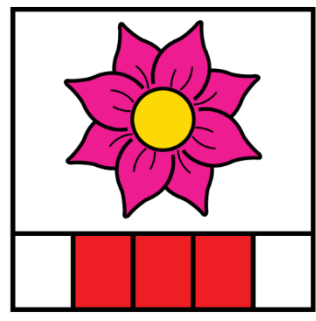

1 de mayo, diya d'o treballo: se convocan manifestazions en as grans ziudaz.

En chunio ubren as piscinas. Fa más calor.

O 21 de chunio remata la primavera y
prenzipia o estiu.

Y con o estiu plegan tamién as vacanzias.
Pero antis o festival de rematanza de
curso
