

PRIMAVERA

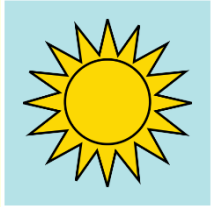

Che cosa succede in questa stagione?

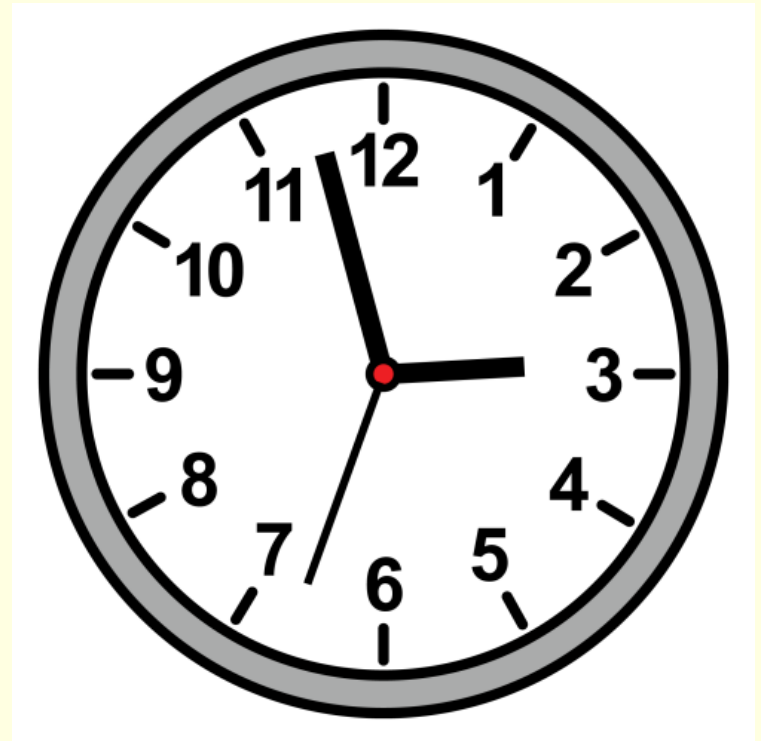

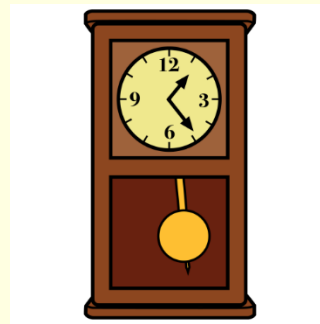

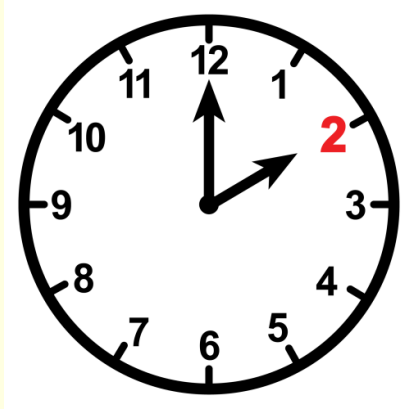

Dopo l'inverno arriva la primavera.
Inizia il 20 marzo.

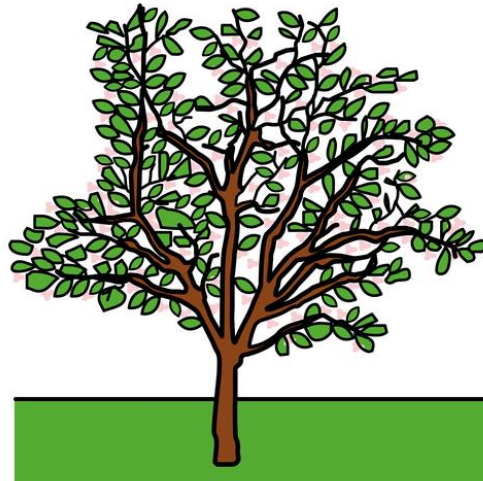

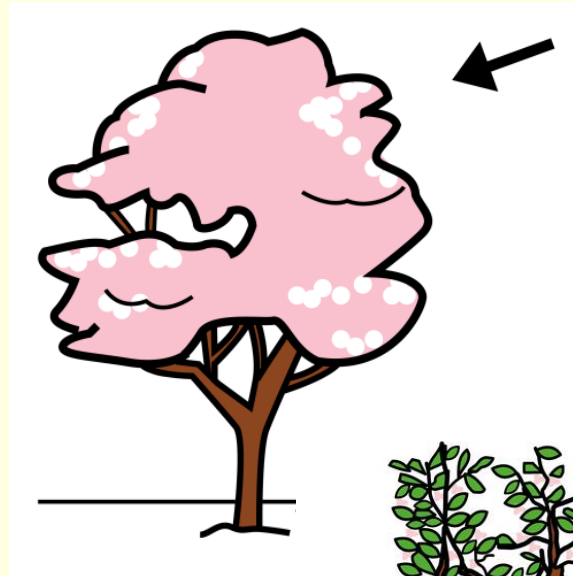

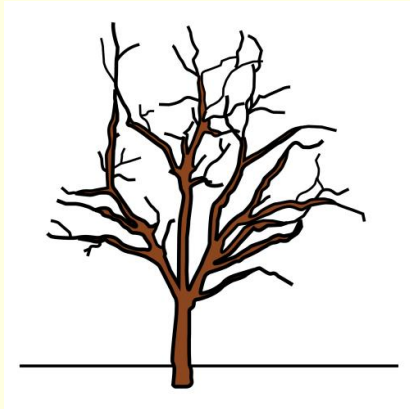

Ci sono più ore di sole. I giorni sono più lunghi e le notti più corte. Il sole scalda di più.

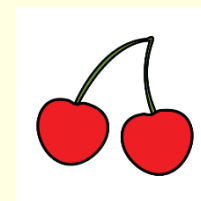

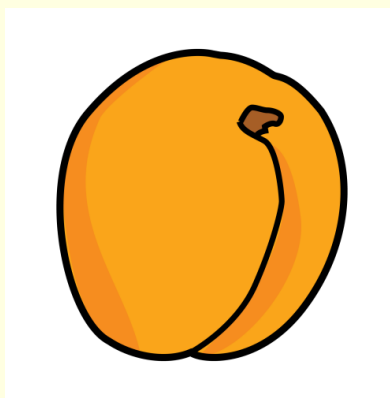

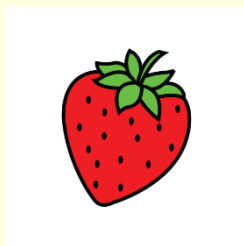

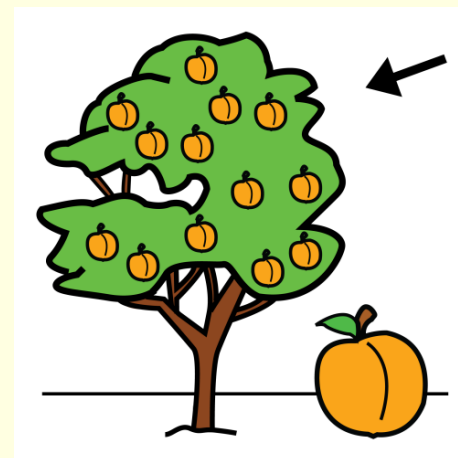

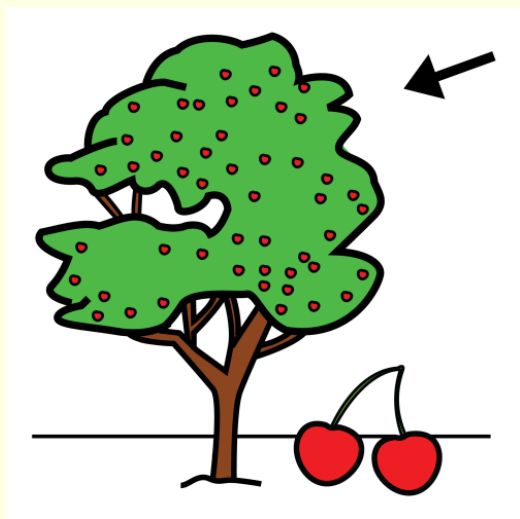

L' ultimo sabato di marzo cambia l'ora: le lancette dell'orologio si spostano avanti di un'ora. Alle due sono le tre.

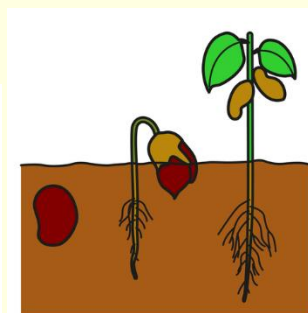

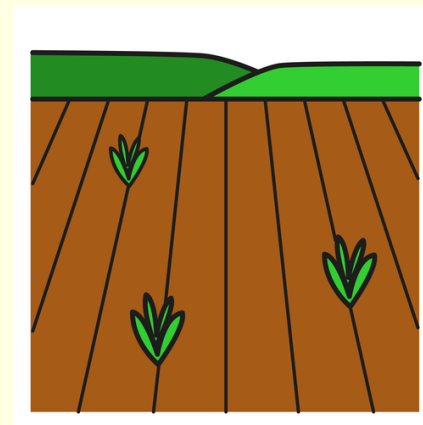

Gli alberi che erano spogli cominciano a fiorire e a germogliare le foglie.

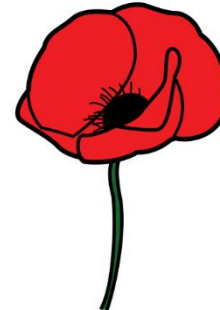

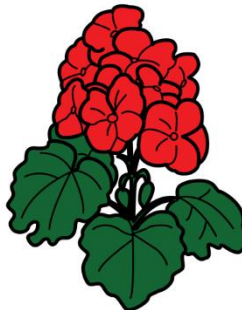

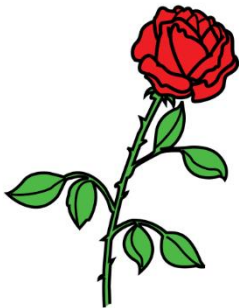

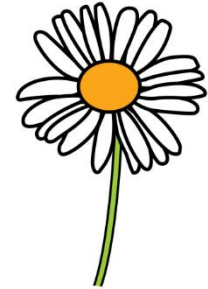

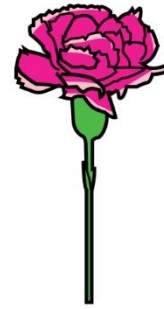

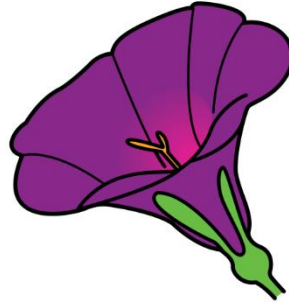

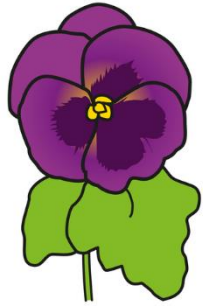

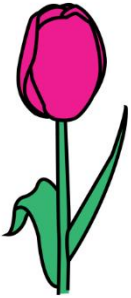

Poi arrivano i frutti: è tempo di ciliegie,
fragole, albicocche, nespole...

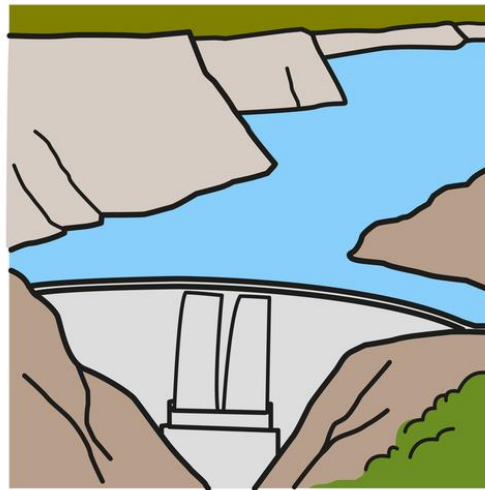

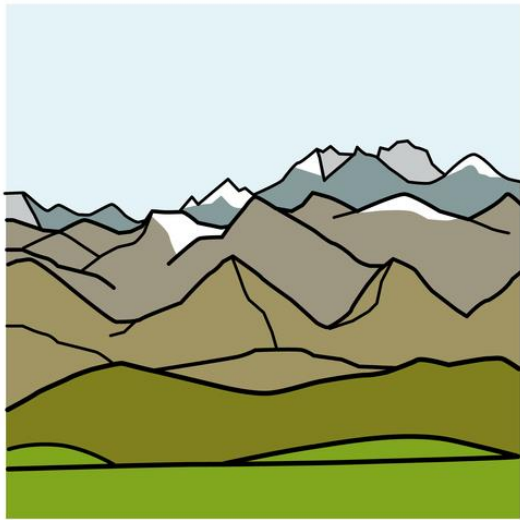

Il paesaggio è molto verde, le piante crescono più velocemente.

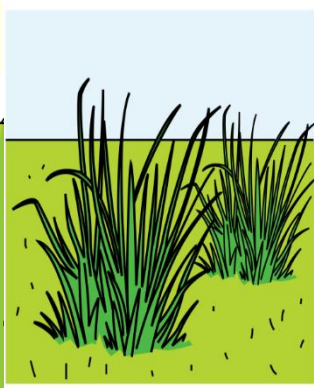

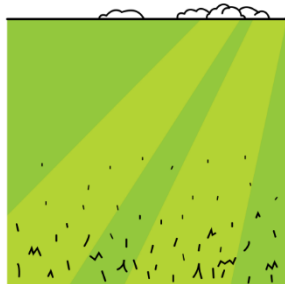

Nei campi e nei giardini fioriscono
papaveri, margherite, campanule, garofani,
gerani, calle, viole del pensiero...

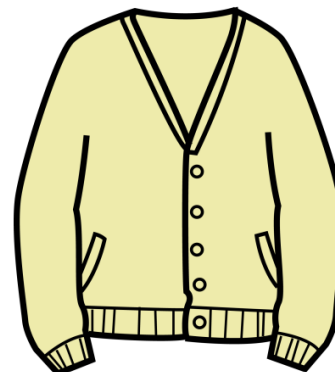

Con il caldo, la neve delle montagne si scioglie e scorre lungo i fiumi per riempire i bacini artificiali e le paludi.

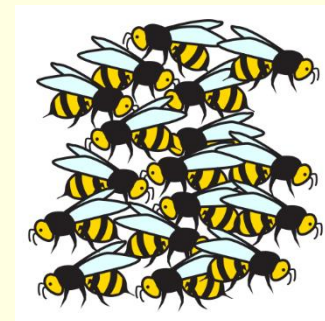

Piove e tutto è molto verde. Cresce l'erba.

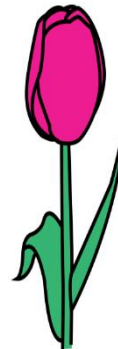

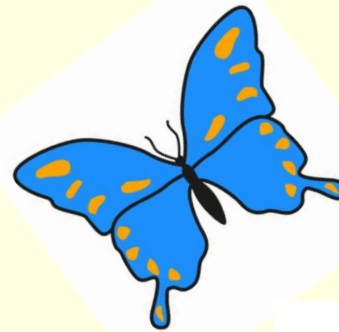

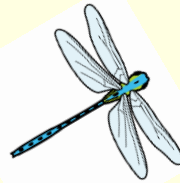

Indossiamo abiti più leggeri. Lasciamo cappotti, sciarpa, guanti, ...

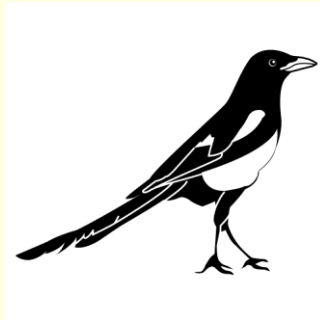

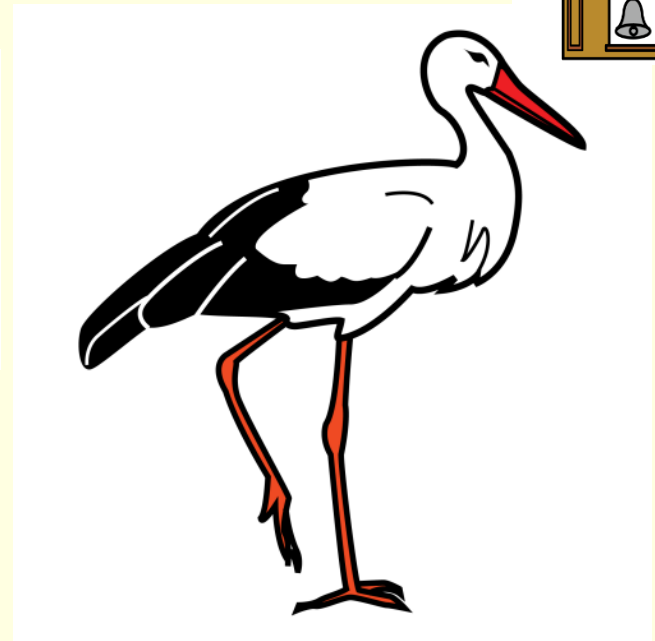

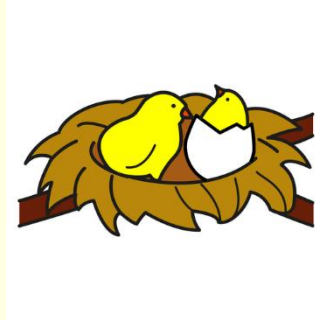

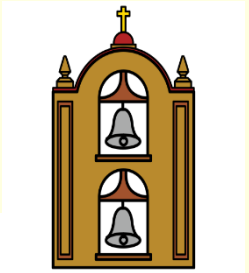

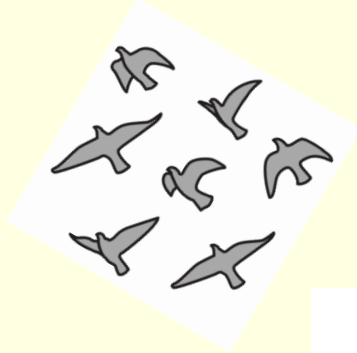

Api, farfalle e altri insetti svolazzano intorno ai fiori.

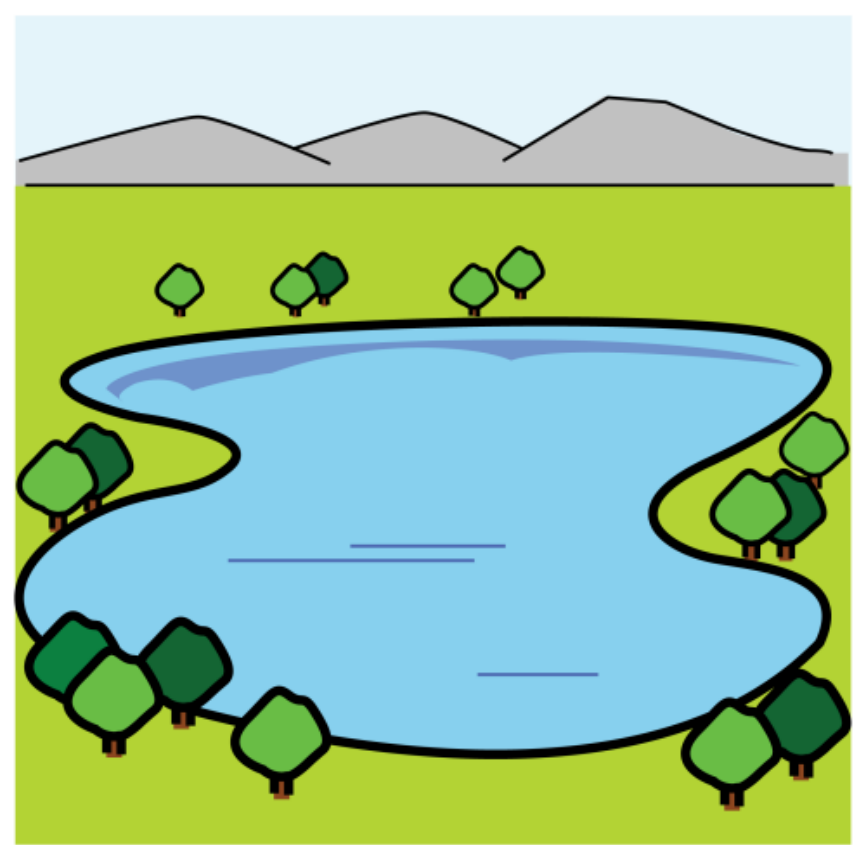

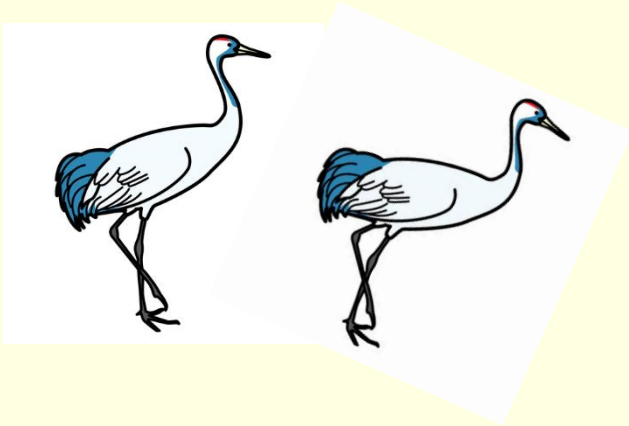

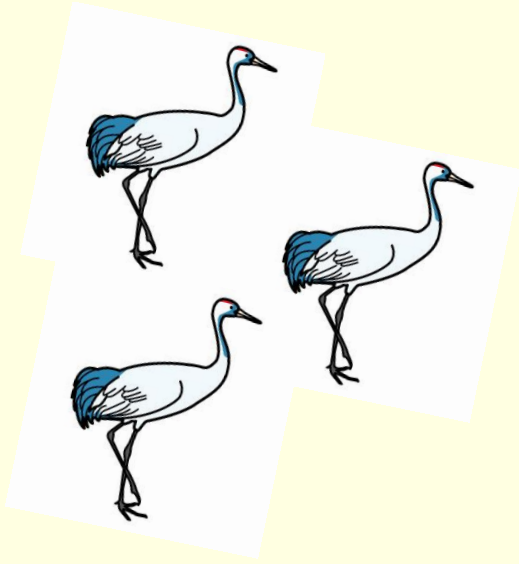

Per succhiare il nettare e nutrirsi.

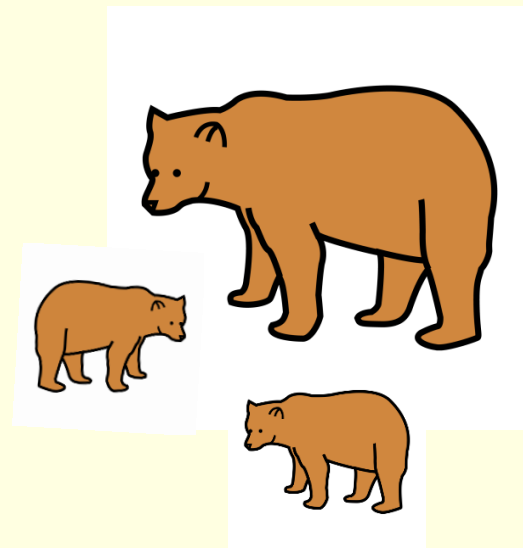

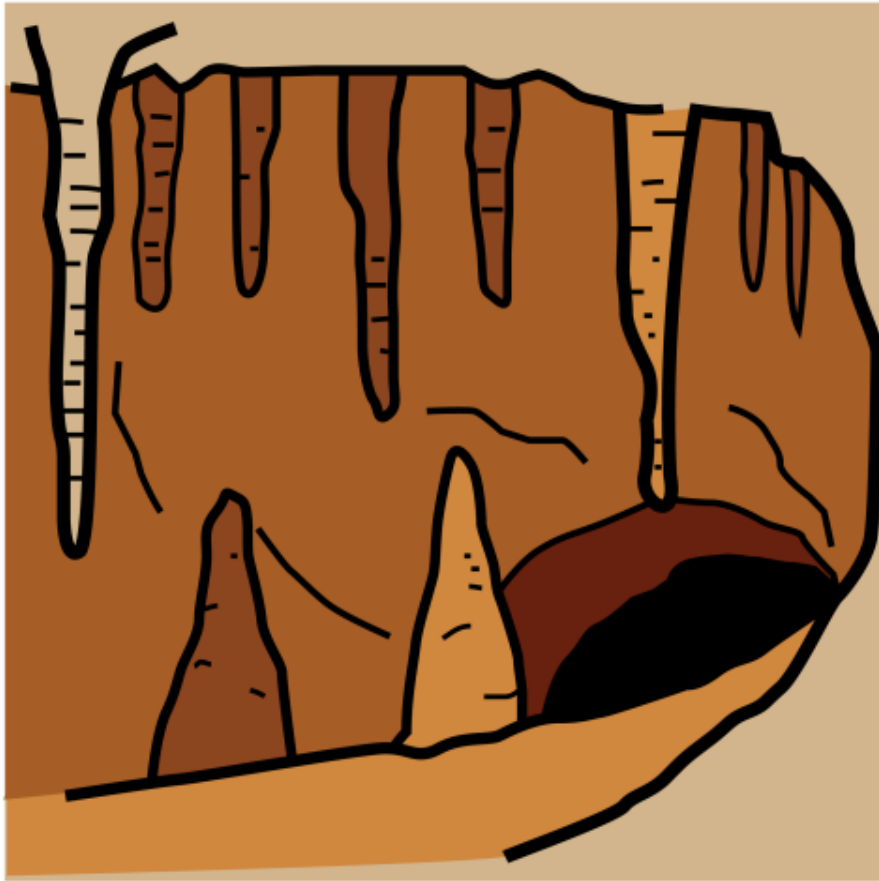

Gli uccelli che sono migrati a causa
del freddo ritornano, fanno il nido e
depongono le uova..

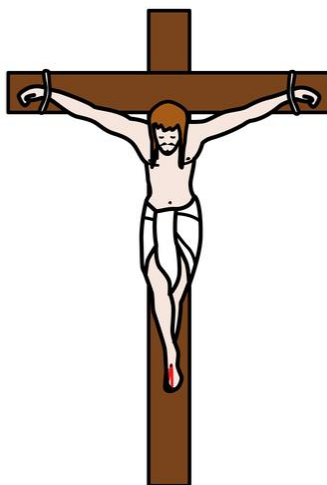

Le gru rtornano nella laguna prima di
proseguire il loro viaggio verso nord.

Gli animali che erano in letargo durante il freddo, lasciano le loro tane.

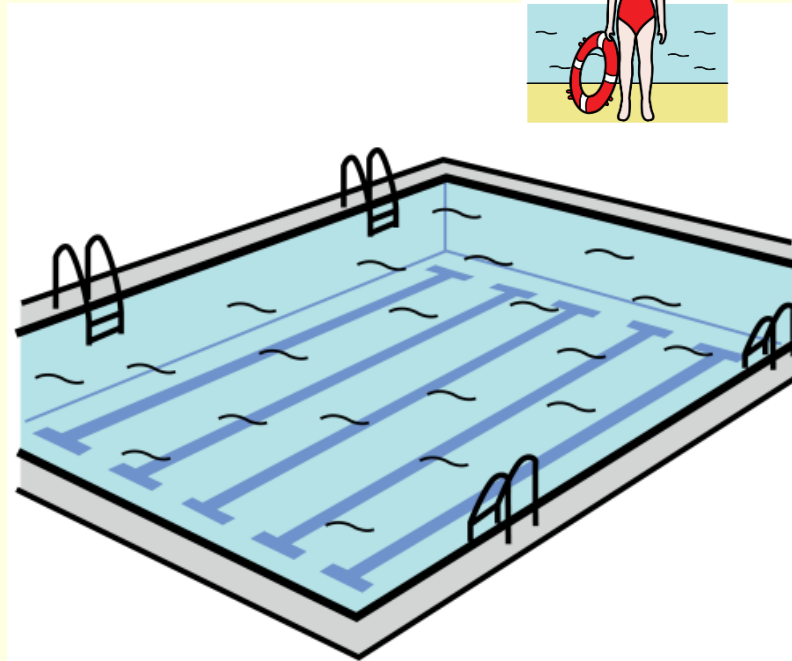

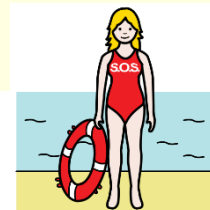

Si celebra la Settimana Santa.

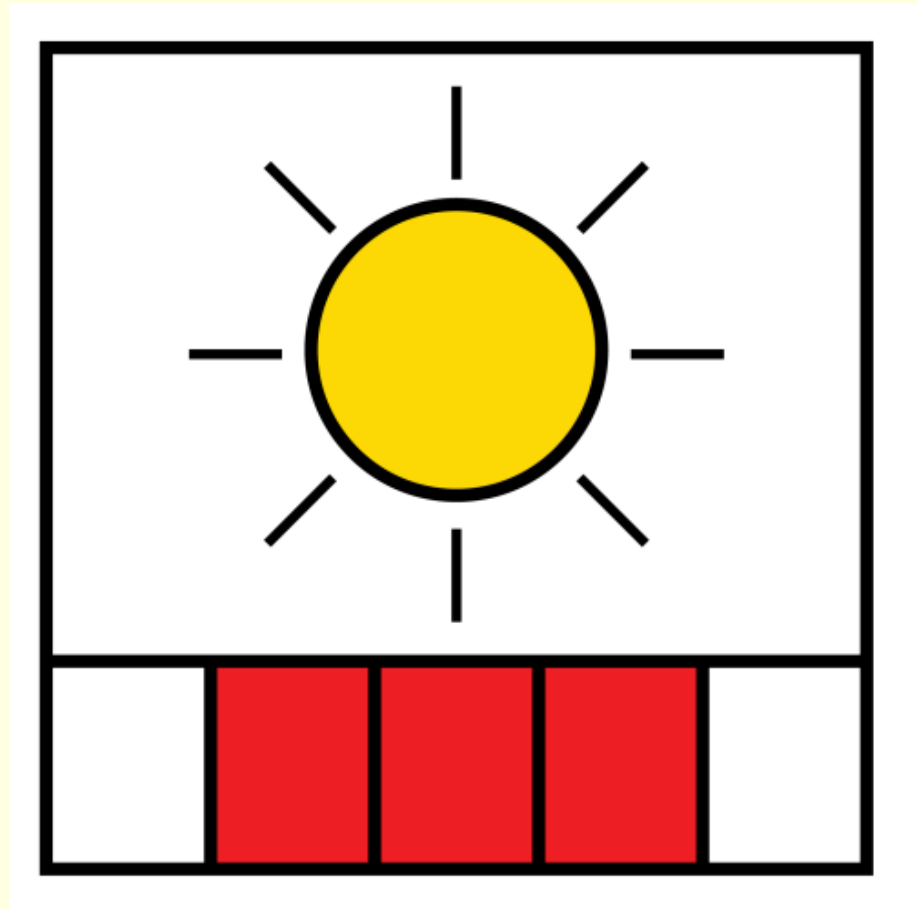

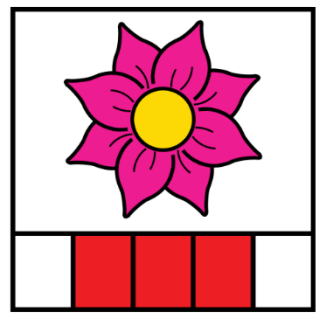

1° di maggio, giorno del lavoro: si svolgono manifestazioni nelle grandi città.

In giugno aprono le piscine. Fa più caldo.

Il 21 giugno finisce la primavera e inizia l'estate.

E con l'estate arrivano le vacanze. Ma prima c'è la festa di fine anno.
