

ПРОЛЕТ

Што се случува на оваа станица?

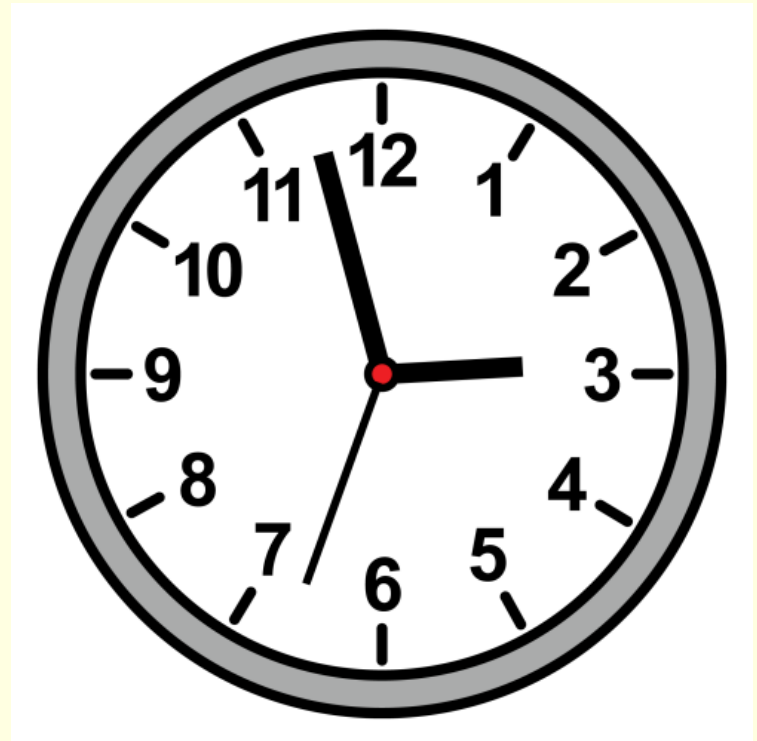

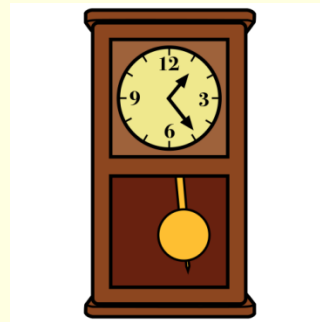

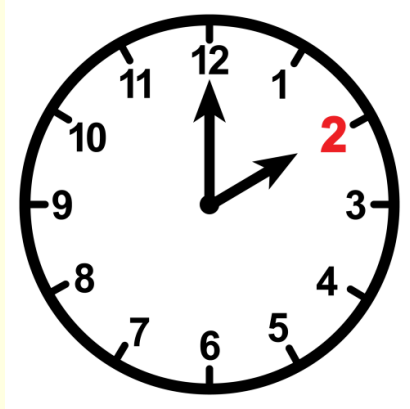

По зимата доаѓа пролет. Започнува на 20 март.

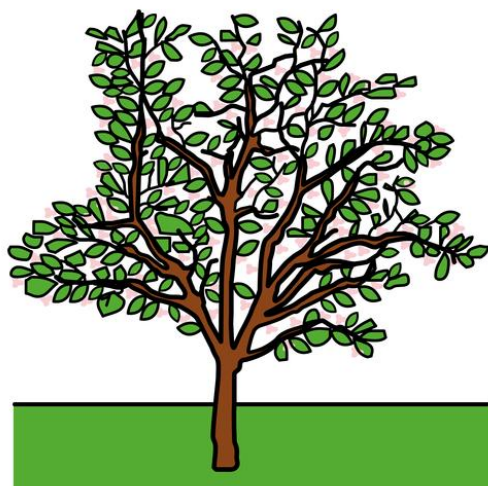

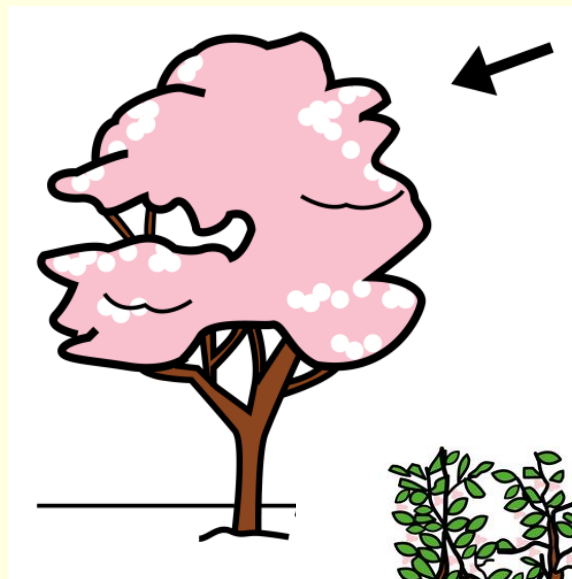

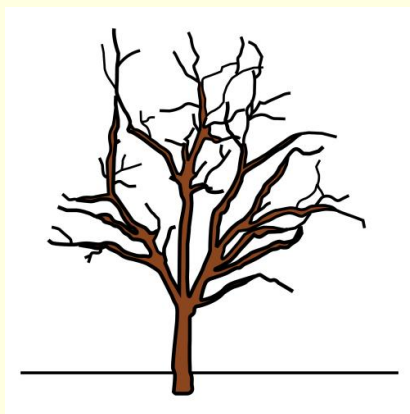

Има повеќе сончеви часови. Деновите се подолги, а ноќите се пократки. Сонцето се загрева повеќе.

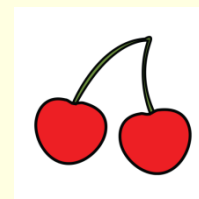

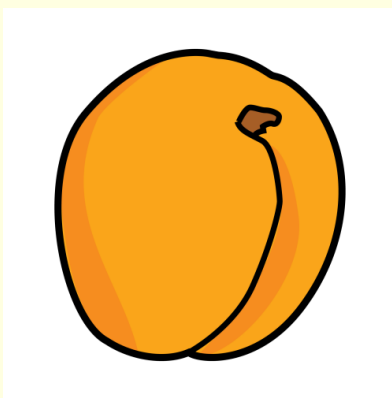

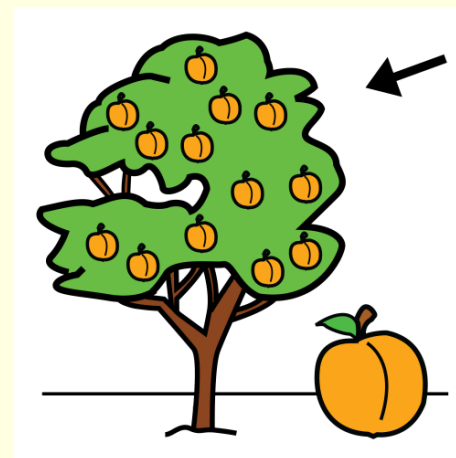

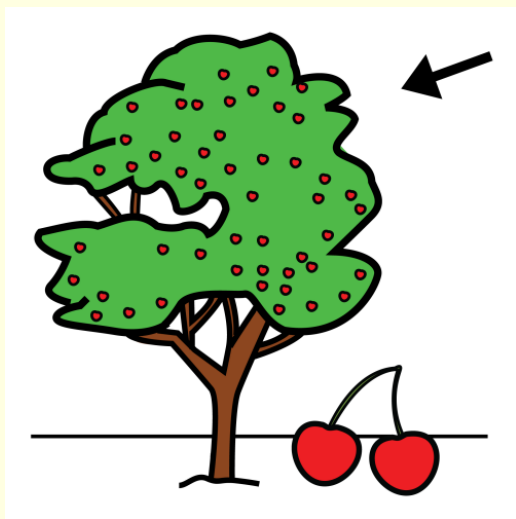

Во последната сабота од март, времето се менува: часовниците одат еден час напред. Во два е три.

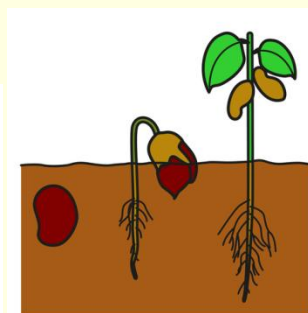

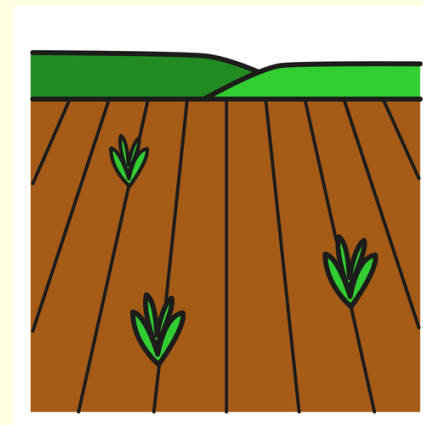

Дрвјата што беа голи почнуваат да цветаат и да никнуваат лисја.

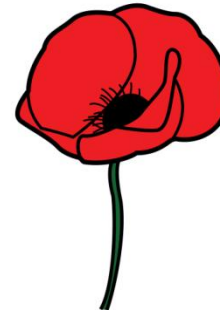

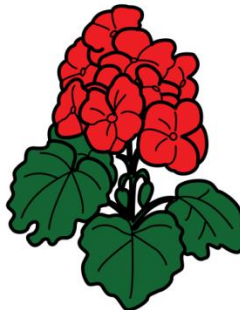

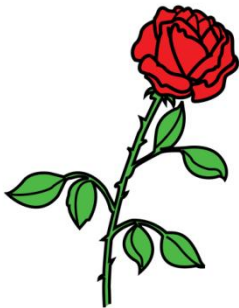

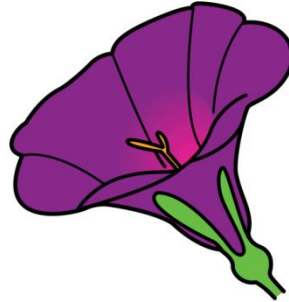

Потоа доаѓаат плодовите: сезона е за цреша, јагоди, кајсии, мушмули...

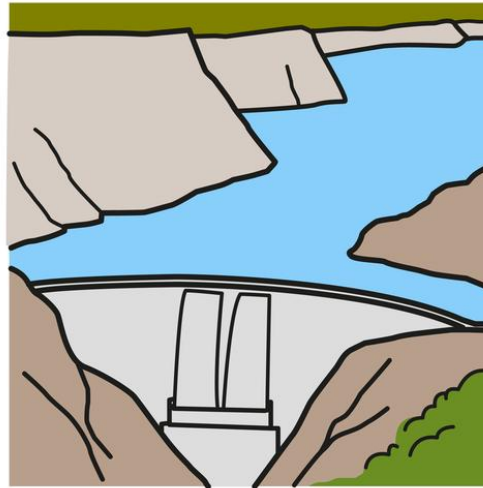

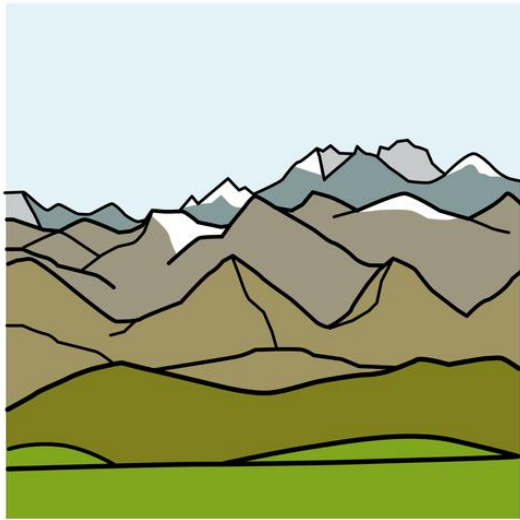

Пејсажот е многу зелен, растенијата
растат побргу.

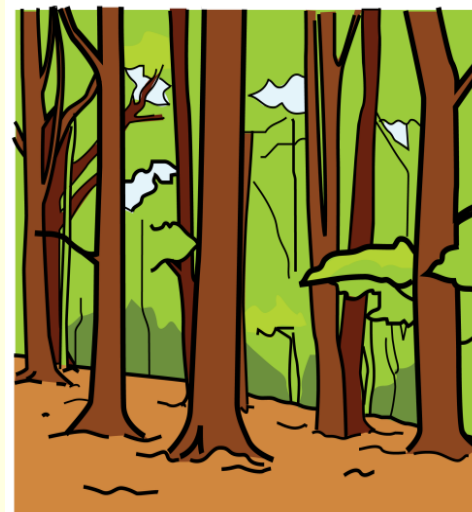

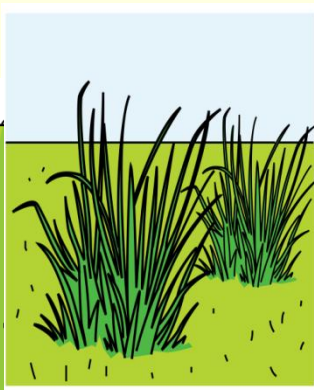

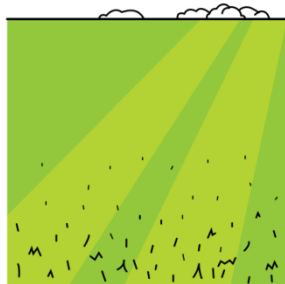

Во полињата и градините цветаат афион,
маргаритки, свончиња, каранфили,
гераниуми, лилјани, панси...

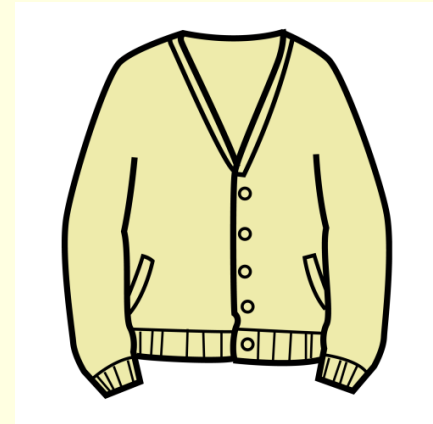

Во топлината, снегот од планините се топи и тече по реките за да ги наполни акумулациите и мочуриштата.

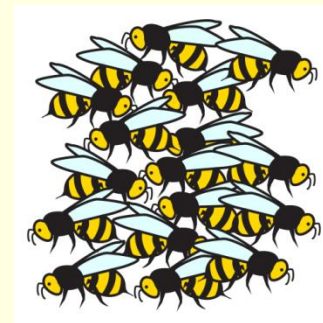

Врне и сè е многу зелено. Тревата расте.

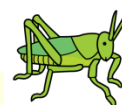

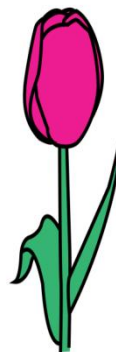

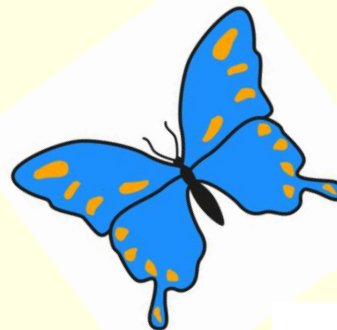

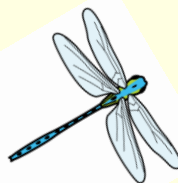

Носиме полесна облека. Ги чуваме капутите, шаловите, ракавиците,...

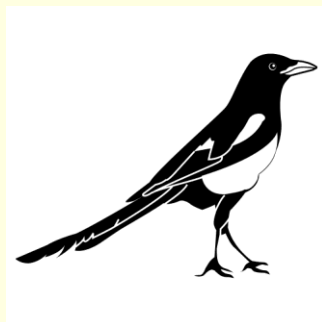

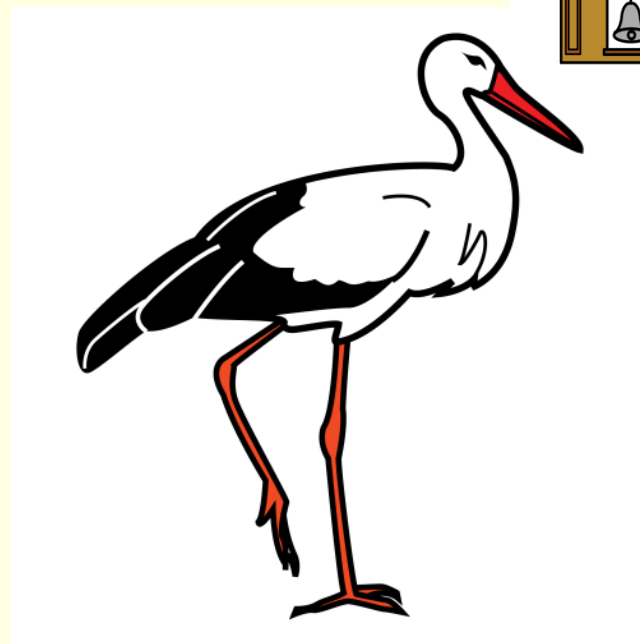

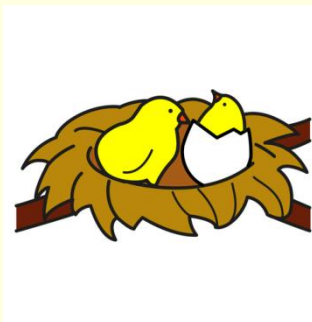

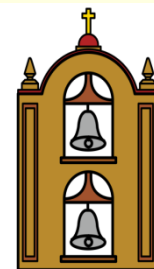

Околу цвеќињата лебдат пчели, пеперутки и други инсекти.

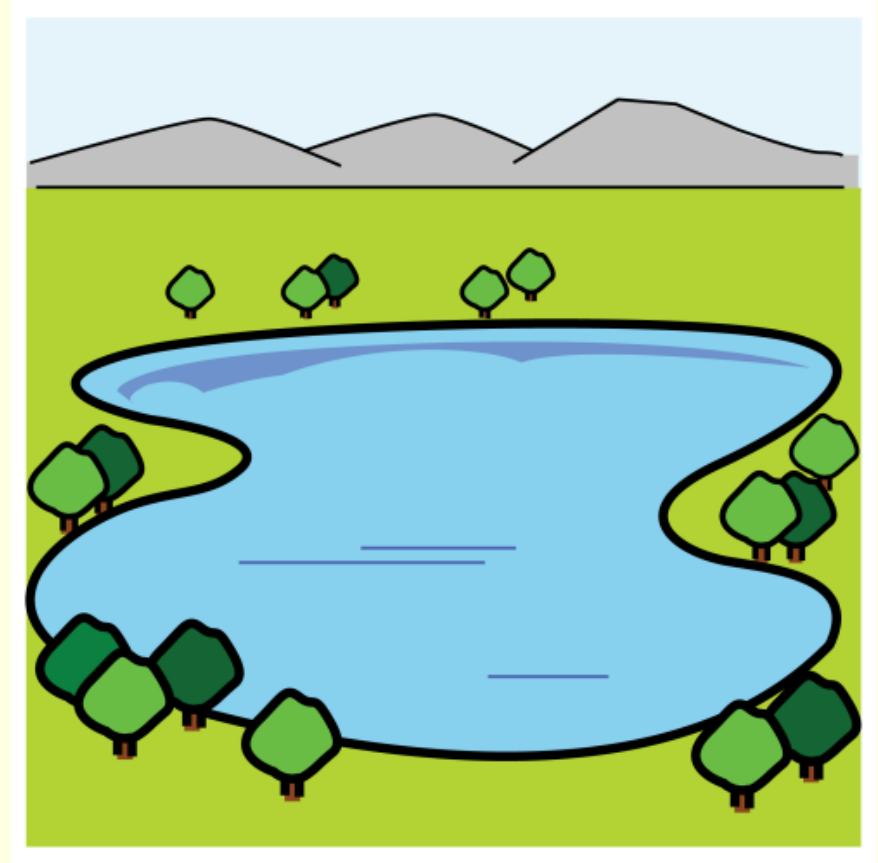

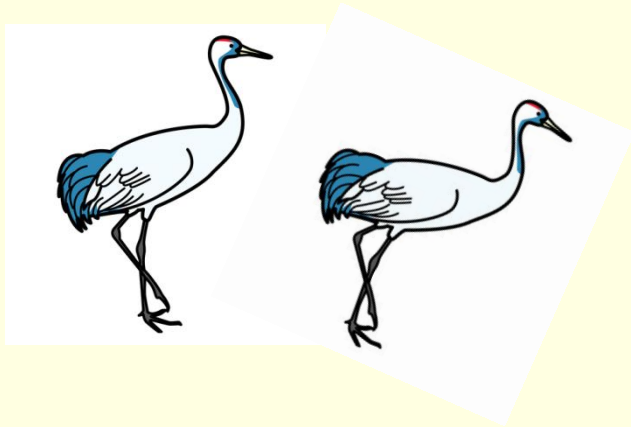

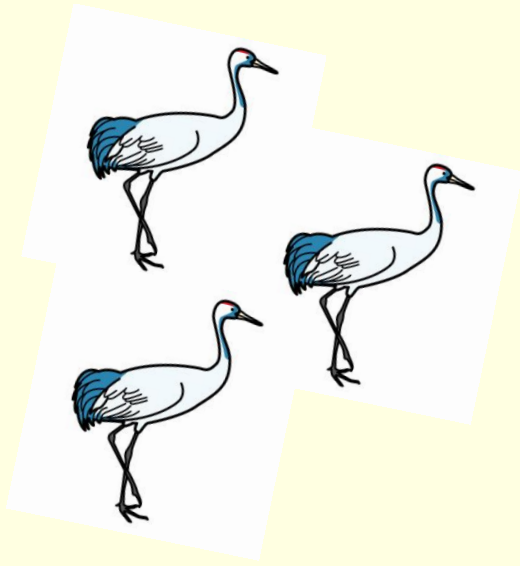

Да цицаат нектар или да се хранат.

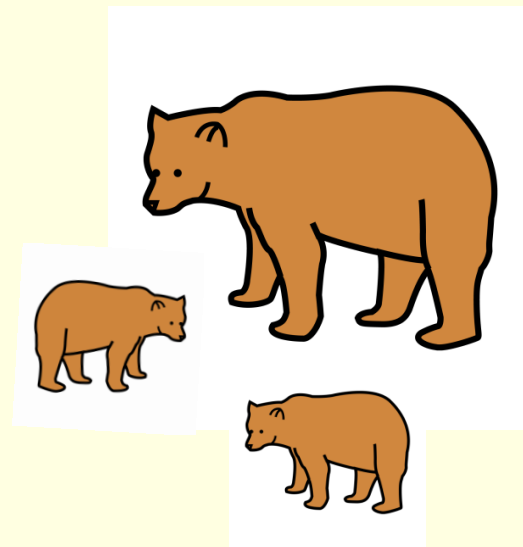

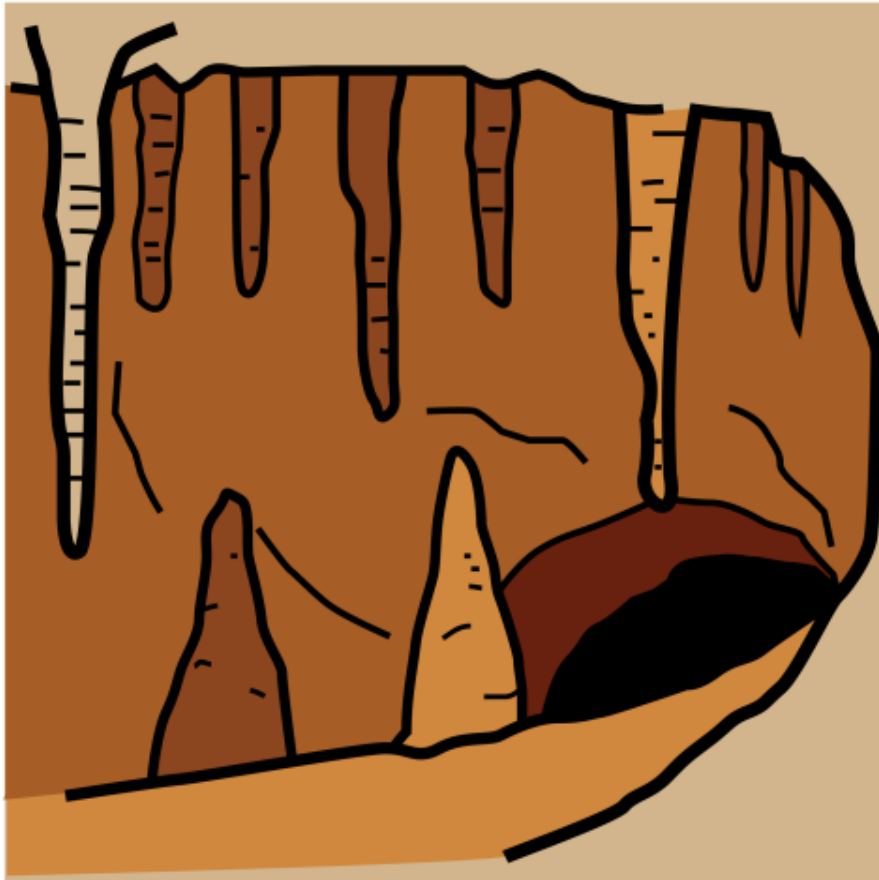

Птиците кои се иселиле поради студот се враќаат, прават гнезда и несат јајца.

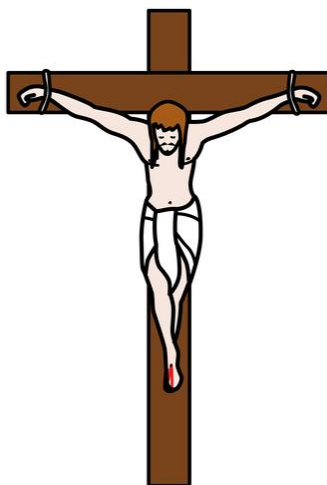

**Крановите се враќаат во лагуната Галоканта
пред да го продолжат своето патување на
север.**

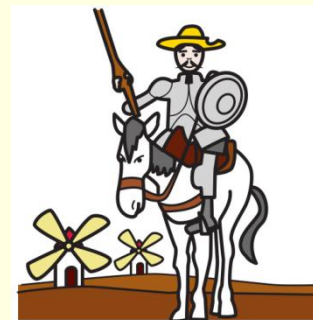

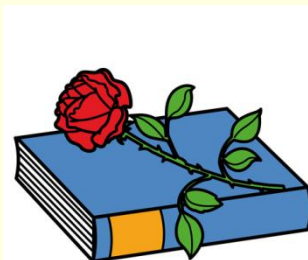

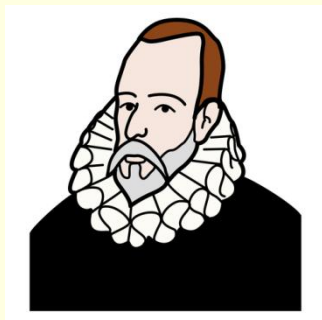

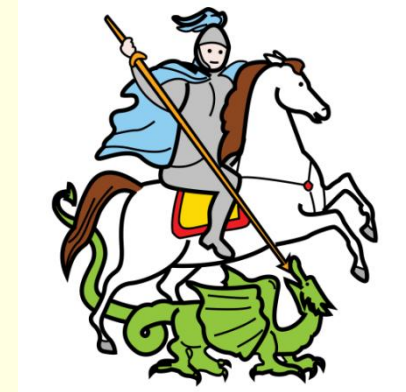

Животните кои станале летаргични за време на студот излегуваат од нивните дувла.

Се празнува Страсната седмица.

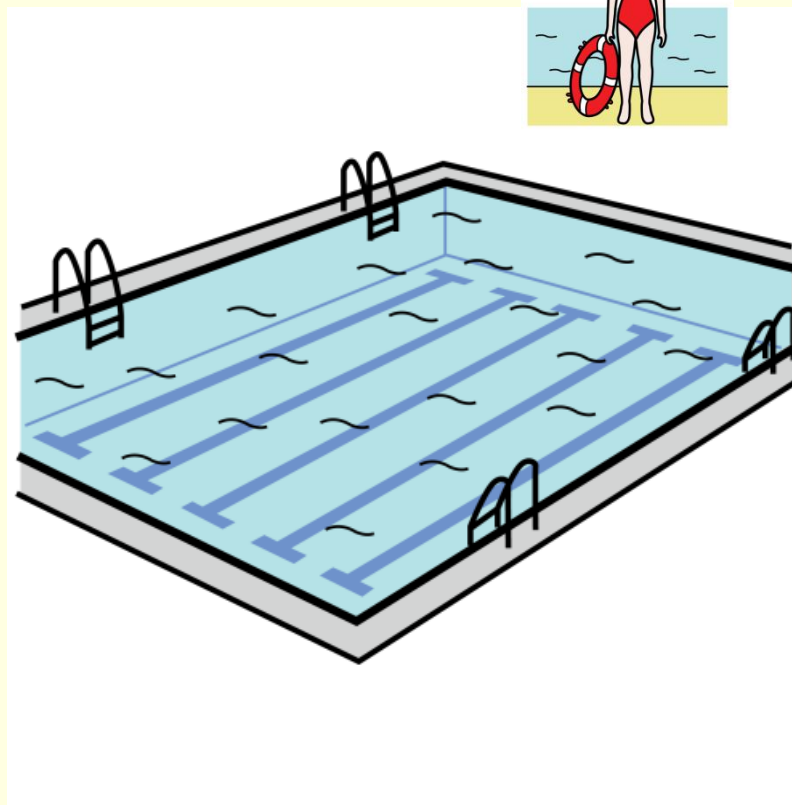

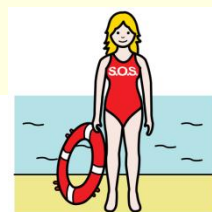

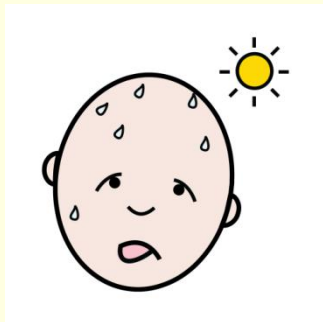

На 23 април, Сан Хорхе (Сан Жорди во Каталонија): се слави денот на книгата и денот на Арагон.

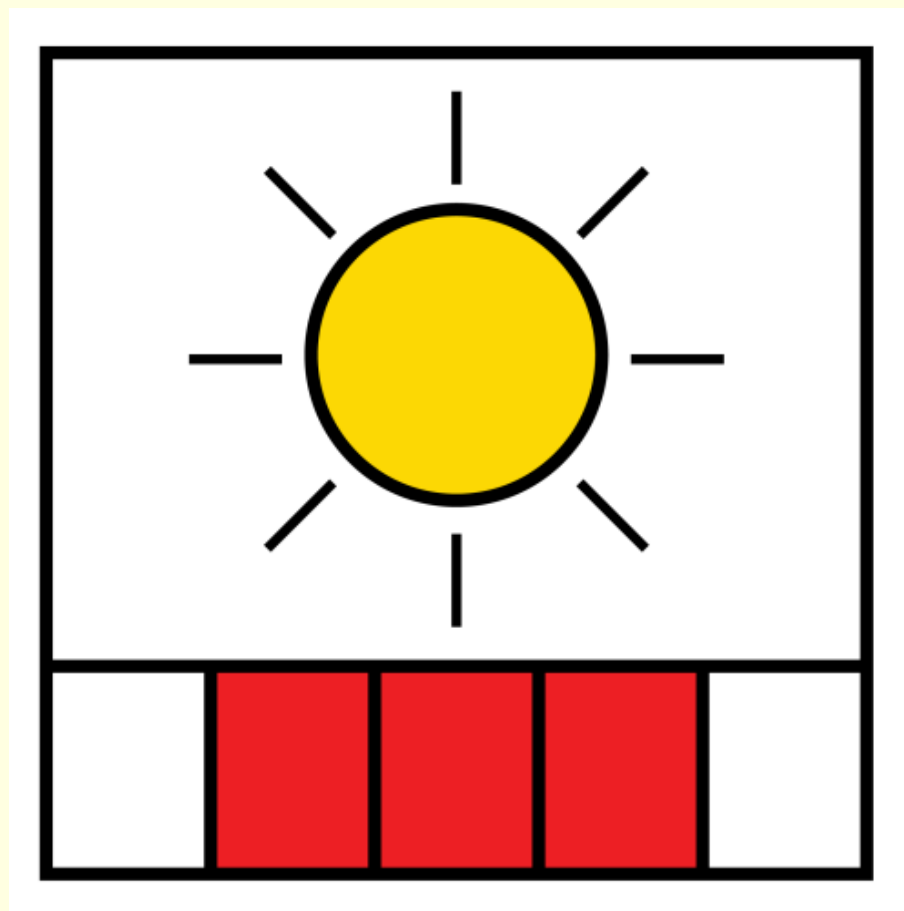

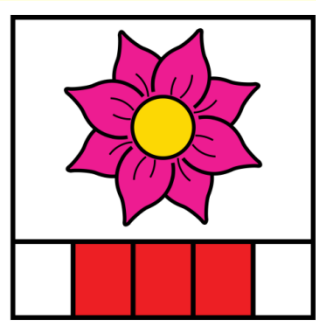

1 Мај, Денот на трудот: Во големите градови се распишуваат демонстрации.

Во јуни базените се отвораат. Потопло е.

**На 21 јуни пролетта завршува и
започнува летото.**

А со летото доаѓаат и одморите. Но, пред крајот на годината фестивал.
